- Connections Via:
  - Option to connect to control panel network
  - Control panel RS485 bus
  - Low current, 24V DC powered
- Slim compact construction
- Configurable functionality
- Configurable languages<sup>3</sup> programmable inputs

### Description

DS-RPC16 provides a means of allowing full display and optional control of the DS-RPC16 from a small and unobtrusive local control station. The large, full colour graphical display with touch screen functionality, delivers information on the status of the fire alarm system to single or multiple locations. DS-RPC16 repeaters can be configured to offer full display and control to replicate the functionality of the Fire Control panel or to operate as a simple, display only device for applications where access to control the Fire Alarm system would be inappropriate.

DS-RPC16 may be connected to the fire control panels' fault tolerant RS485 network using standard, fire rated cable offering flexibility in system wiring. Available in several standard formats, DS-RPC16 can be mounted directly onto a wall, be recessed using our quick-fix adaptor frame or fully flush mounted. Special enclosure finishes and colours are also available to match existing decor.
